

Cuscinetti a due/quattro corone di rulli cilindrici

Cylindrical roller bearings, double/four row

CUSCINETTI A DUE/QUATTRO CORONE DI RULLI CILINDRICI

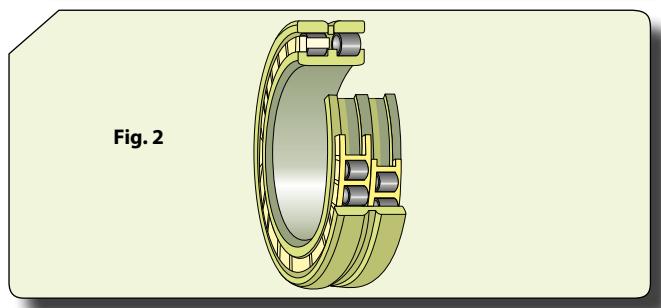

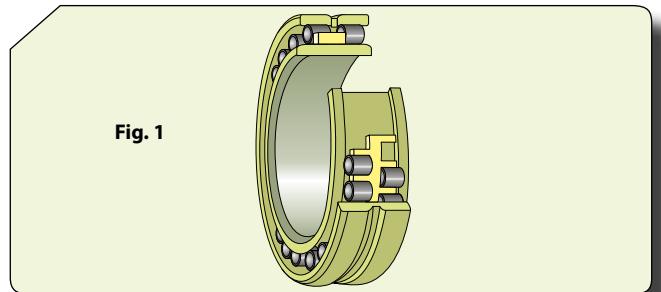

Cuscinetti a due corone di rulli cilindrici

I cuscinetti a due corone di rulli cilindrici sono di due tipi: NNU (**Fig. 1**) ed NN (**Fig. 2**).

TWO / FOUR ROWS CYLINDRICAL ROLLER BEARINGS

Two-rows cylindrical roller bearings

*There are two types of double-row cylindrical roller bearings: NNU (**Fig. 1**) and NN (**Fig. 2**).*

I rulli dei cuscinetti di forma NNU sono guidati fra gli orletti dell'anello esterno mentre quelli dei cuscinetti NN sono guidati fra gli orletti dell'anello interno.

L'altro anello è privo di orletti; questi cuscinetti consentono quindi, entro determinati limiti, spostamenti assiali dell'albero rispetto all'alloggiamento.

Essi sono scomponibili, ossia l'anello con gli orletti, i rulli e la gabbia possono essere sfilati dall'altro anello e venire montati separatamente. Il loro montaggio è quindi relativamente semplice.

I cuscinetti a due corone di rulli cilindrici generalmente hanno un piccolo ingombro radiale, una forte capacità di carico e un ridotto cedimento elastico. Le soluzioni costruttive realizzate con questi cuscinetti possono sopportare forti carichi e sono molto rigide. Questi cuscinetti vengono quindi impiegati principalmente nelle macchine utensili e nei laminatoi, ma vengono anche montati nei grossi riduttori industriali.

I cuscinetti a due corone di rulli cilindrici possono essere forniti con foro cilindrico o conico (conicità 1:12). Per consentire di ottenere più facilmente un'efficace lubrificazione, praticamente tutti i cuscinetti sono dotati di una scanalatura anulare e tre o sei fori di lubrificazione sull'anello esterno.

Cuscinetti a quattro corone di rulli cilindrici

I cuscinetti a quattro corone di rulli cilindrici (**Fig. 3**) vengono montati quasi esclusivamente nei laminatoi. Essi hanno un attrito inferiore a quello di altri cuscinetti a rulli e possono venire usati con successo quando è necessario un funzionamento a velocità elevata.

The rollers of the NNU bearings are guided between the edges of the outer ring, while those of the NN bearings are guided between the edges of the inner ring.

The other ring has no edges; these bearings therefore allow, within certain limits, axial displacements of the shaft with respect to the housing.

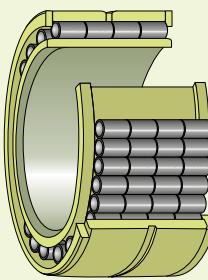

They can be dismantled, i.e. the ring with the edges, the rollers and the cage can be removed from the other ring and be mounted separately. Their assembly is therefore relatively simple.

Double-row cylindrical roller bearings generally have a small radial footprint, strong load carrying capacity and low spring failure. The construction solutions made with these bearings can withstand heavy loads and are very rigid. Therefore, these bearings are mainly used in machine tools and rolling mills, but are also mounted in large industrial gearboxes.

Double-row cylindrical roller bearings can be supplied with cylindrical or tapered bore (taper 1:12). To allow you to more easily obtain effective lubrication, virtually all bearings are equipped with an annular groove and three or six lubrication holes on the outer ring.

Four-row cylindrical roller bearings

*Four-row cylindrical roller bearings (**Fig. 3**) are installed almost exclusively in rolling mills. They have lower friction than other roller bearings and can be used successfully when high speed operation is required.*

Fig. 3

Vengono forniti nelle esecuzioni FC (**Fig. 4a**), FCP (**Fig. 4b**) e FCDP (**Fig. 4c**).

*They are supplied in the versions FC (**Fig. 4a**), FCP (**Fig. 4b**) and FCDP (**Fig. 4c**).*

Fig. 4a**Fig. 4b****Fig. 4c**

Nei cuscinetti a quattro corone di rulli cilindrici i rulli sono guidati sull'anello esterno fra orletti integrali o non integrali.

L'anello interno è privo di orletti; il cuscinetto può quindi far fronte, entro determinati limiti, a spostamenti assiali dell'albero rispetto all'alloggiamento.

A seconda dell'applicazione, i cuscinetti a quattro corone di rulli cilindrici possono essere forniti con foro cilindrico o conico.

Gli anelli interni ed esterni possono essere in un solo pezzo o in più pezzi.

Dimensioni

Le dimensioni dei cuscinetti ISB ad una corona di rulli cilindrici sono conformi alla norma ISO 15. I diametri esterno ed interno di molti dei cuscinetti a quattro corone di rulli cilindrici corrispondono ai valori standardizzati per le Serie diametrali 9 o 0.

Tolleranze

Tutti i cuscinetti a due corone di rulli cilindrici con designazione NN sono costruiti secondo le classi di precisione normale; quelli con designazione NNU hanno una precisione dimensionale conforme alla classe P6 e una precisione di funzionamento corrispondente alla classe P5.

I cuscinetti a quattro corone di rulli cilindrici con foro cilindrico o conico hanno una precisione dimensionale corrispondente alla classe P6 e una precisione di funzionamento conforme alla classe P5.

Giuoco

I cuscinetti a due corone di rulli cilindrici su richiesta possono essere forniti con gioco radiale C1 per applicazioni su macchine utensili mentre quelli della classe di precisione SP, specialmente quelli della serie NNU 49, possono essere forniti anche con gioco radiale maggiorato, generalmente quello C3, necessario per le applicazioni nei laminatoi.

In four-row cylindrical roller bearings, the rollers are guided on the outer ring between integral or non-integral flanges.

The inner ring is devoid of edges; the bearing can therefore cope with shaft axial displacements, within certain limits, with respect to the housing.

Depending on the application, four-row cylindrical roller bearings can be supplied with cylindrical or tapered bore.

The inner and outer rings can be in one piece or in several pieces.

Dimensions

The dimensions of ISB single row cylindrical roller bearings comply with ISO 15 standard. The outer and inner diameters of many of the four-row cylindrical roller bearings correspond to the values standardized for diameter series 9 or 0.

Tolerances

All double-row cylindrical roller bearings with NN designation are built to normal accuracy classes; those with NNU designation have a dimensional accuracy in accordance with class P6 and an operating accuracy corresponding to class P5.

Four-row cylindrical roller bearings with cylindrical or tapered bore have dimensional accuracy corresponding to class P6 and an operating accuracy conforming to class P5.

Clearance

Upon request, double row cylindrical roller bearings can be supplied with radial clearance C1 for applications on tool machineries while those with precision class SP, especially the NNU 49 series, can also be supplied with increased radial clearance, generally C3, required for rolling mill applications.

More generally, four-row cylindrical roller bearings

Più in generale i cuscinetti a quattro corone di rulli cilindrici con foro cilindrico e foro conico possono essere forniti con gioco radiale C3 o C4 in funzione delle esigenze specifiche dell'applicazione.

Alla luce di quanto sopra, gli anelli di questi cuscinetti non devono essere scambiati fra di loro, altrimenti il gioco può variare fino a valori differenti da quelli ottenuti in fase di definizione della coppia di anelli costituenti il cuscinetto originario.

Disallineamento

I cuscinetti a due e quattro corone di rulli cilindrici non sono progettati per far fronte ad alcun disallineamento.

Temperatura di funzionamento

Sottoposti a speciali trattamenti termici, se muniti di gabbia in acciaio o di ottone i cuscinetti a due o quattro corone di rulli cilindrici possono essere impiegati a temperature massime fino a + 150°C; nel caso in cui sia prevista una gabbia in poliammide 6,6 si raggiunge una temperatura di esercizio massima di + 120°C.

Gabbie

I cuscinetti a due corone di rulli cilindrici sono generalmente dotati o di una gabbia in un sol pezzo, massiccia, d'ottone a doppio pettine, oppure di due gabbie separate, a pettine, in poliammide 6,6 rinforzata con fibre di vetro (suffisso TN9).

Alcuni cuscinetti hanno due gabbie d'acciaio del tipo chiodato.

I cuscinetti a quattro corone di rulli cilindrici montano due gabbie massicce d'ottone o d'acciaio a doppio pettine, oppure quattro gabbie d'acciaio del tipo a perni.

Appellativi supplementari

C2	Giuoco interno radiale inferiore al normale
C3	Giuoco interno radiale maggiore del normale
C4	Giuoco interno radiale maggiore di C3
J	Gabbia stampata in lamiera d'acciaio
K	Foro conico, conicità 1:12
M	Gabbia massiccia in ottone in due parti, centrata sui rulli
MA	Gabbia massiccia in ottone in due parti centrata sull'anello esterno
MB	Gabbia massiccia in ottone in due parti centrata sull'anello interno
N	Scanalatura per anello di ancoraggio nel diametro esterno dell'anello esterno
NR	Scanalatura e idoneo anello di ancoraggio sull'anello esterno
P	Gabbia stampata ad iniezione, in poliammide 6,6 rinforzata con fibre di vetro
W33	Scanalatura circonferenziale e tre fori di lubrificazione sull'anello esterno
K30	Foro conico, conicità 1:30
TN9	Gabbia stampata ad iniezione, a scatto, in poliammide 6,6 rinforzata con fibre di vetro centrata sulle sfere

with cylindrical bore and tapered bore can be supplied with radial clearance C3 or C4 depending on the specific needs of the application.

For what above, the rings of these bearings must not be interchanged, otherwise the clearance may vary up to values different from those obtained when defining the pair of rings making up the original bearing.

Misalignment

Double and four-row cylindrical roller bearings are not designed to cope with any misalignment.

Operating temperature

Subjected to special heat treatments, if equipped with a steel or brass cage, the two or four-row cylindrical roller bearings can be used at maximum temperatures up to + 150° C; in case of a polyamide 6,6 cage, a maximum operating temperature of + 120 ° C may be reached.

Cages

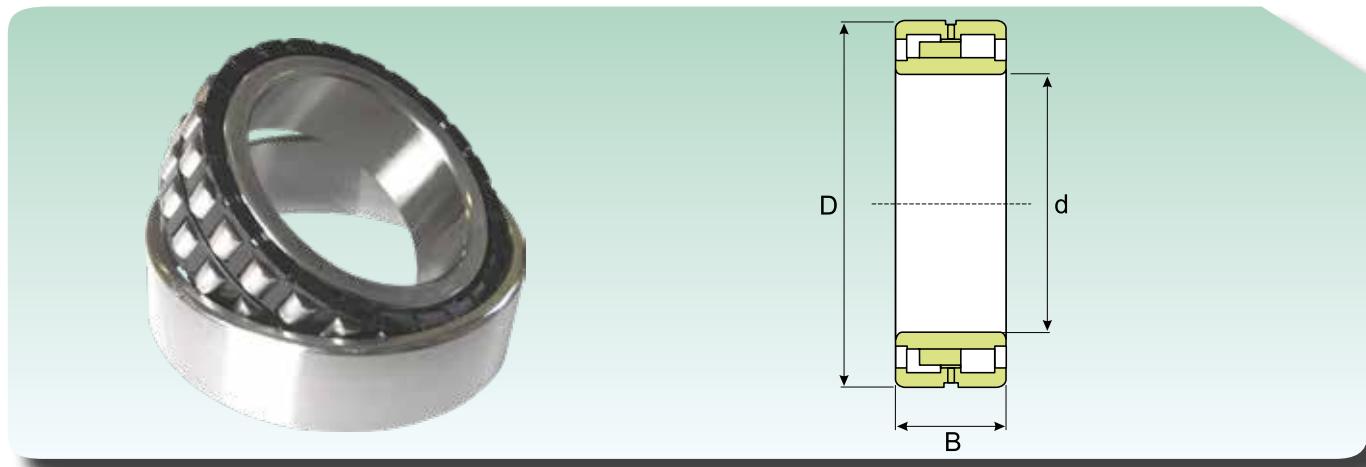

Double-row cylindrical roller bearings are generally equipped with either a one-piece, solid, double-row brass cage, or two separate, comb-type, glass-fiber reinforced polyamide 6,6 cages (suffix TN9).

Some bearings have two steel cages of the riveted type. The four-row cylindrical roller bearings mount two solid brass or steel double-comb cages, or four pin-type steel cages.

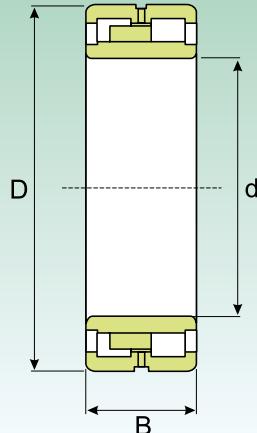

Additional suffixes

C2	Internal radial clearance less than Normal
C3	Internal radial clearance greater than Normal
C4	Internal radial clearance greater than C3
J	Steel sheet molded cage
K	Tapered bore, taper 1:12
M	Solid brass cage in two parts, centered on the rollers
MA	Solid brass cage in two parts centered on the outer ring
MB	Solid brass cage in two parts centered on the inner ring
N	Groove for snap spring in the outer diameter of the outer ring
NR	Groove and suitable snap ring on the outer ring
P	Injection molded cage in polyamide 6,6, reinforced with glass fibers
W33	Circumferential groove and three lubrication holes on the outer ring
K30	Tapered bore, taper 1:30
TN9	Injection molded, snap-in cage in polyamide 6,6, reinforced with glass fibers, balls-centered
