

Cuscinetti a rulli conici, serie metriche ed in pollici

Tapered roller bearings, metric series and inches series

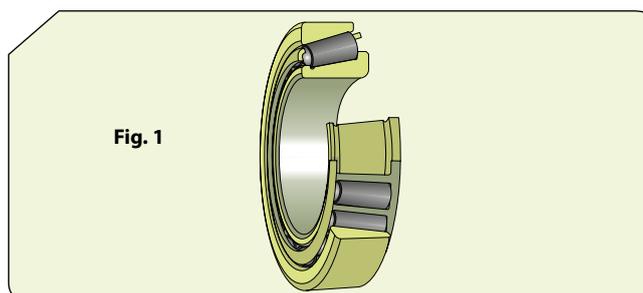

CUSCINETTI A RULLI CONICI

I cuscinetti ISB ad una corona di rulli conici hanno piste coniche sia sull'anello interno che su quello esterno con interposizione di rulli conici (**Fig. 1**). La forma costruttiva dei cuscinetti ISB ad una corona di rulli conici li rende particolarmente adatti a reggere carichi combinati radiali ed assiali. I cuscinetti a rulli conici sono scomponibili in quanto l'anello interno, con il gruppo rulli e la gabbia, forma un'unità che può essere montata indipendentemente dall'anello esterno; è tuttavia fondamentale segnalare che, pur essendo scomponibili, le coppie coppa-cono costituiscono un'unità non interscambiabile motivo per cui, durante le fasi di installazione, è necessario garantire che non vengano accoppiate coppe e coni appartenenti a cuscinetti differenti.

TAPERED ROLLER BEARINGS

ISB single row tapered roller bearings have tapered raceways on both the inner and outer rings, with interposition of tapered rollers (**Fig. 1**). The construction shape of ISB single row tapered roller bearings makes them particularly suitable for supporting combined radial and axial loads. The tapered roller bearings can be dismantled as the inner ring, with the roller assembly and the cage, forms a unit that can be mounted independently of the outer ring; however, it is essential to point out that, despite being separable, the cup-cone pairs constitute a non-interchangeable unit: therefore, during the installation phases, it is necessary to ensure that cups and cones belonging to different bearings are not coupled.

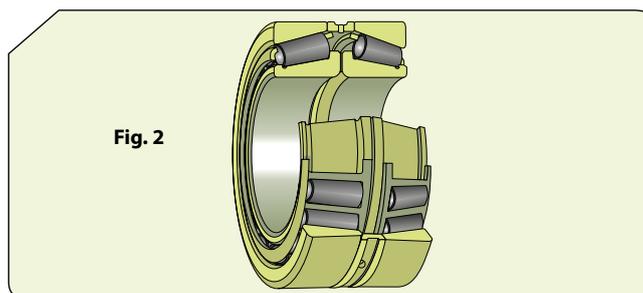

Cuscinetti ad una corona di rulli conici appaiati

Nei sistemi in cui la capacità di carico di un solo cuscinetto a rulli conici non è sufficiente oppure quando l'albero deve essere vincolato assialmente in entrambe le direzioni con un dato giuoco assiale positivo o negativo, si possono impiegare i cuscinetti descritti nella sezione "Cuscinetti ad una corona di rulli conici" disponibili come coppie appaiate (**Fig. 2**) e disposti ad "X".

Matched single row tapered roller bearings

In systems where the load carrying capacity of a single tapered roller bearing is not sufficient, or when the shaft must be axially constrained in both directions with a given positive or negative axial clearance, the bearings described in the section "single-row tapered roller bearings" can be used, available as matched pairs (**Fig. 2**) and arranged in an "X" shape.

I gruppi appaiati rappresentano una soluzione economica per risolvere molti problemi ed offrono diversi vantaggi:

- montaggio semplificato;
- posizionamento esatto dell'albero in senso assiale;
- elevata capacità di carico assiale e radiale;
- manutenzione semplificata; in questo caso il lubrificante può essere introdotto attraverso la scanalatura anulare ed i fori di lubrificazione del distanziale intermedio.

Paired groups represent an economical solution to solve many problems and offer several advantages:

- simplified assembly;
- exact positioning of the shaft in the axial direction;
- high axial and radial load capacity;
- simplified maintenance; in this case, the lubricant can be introduced through the annular groove and the lubrication holes of the intermediate spacer.

Dimensionamento

Le dimensioni d'ingombro dei cuscinetti ISB ad una corona di rulli conici metrici sono conformi alla ISO 355. I cuscinetti ISB ad una corona di rulli conici in pollici seguono le norme ANSI/ABMA 19.2.

Dimensions

The overall dimensions of ISB single-row metric tapered roller bearings comply with ISO 355 standard. ISB single row inch tapered roller bearings follow ANSI / ABMA 19.2 standards.

Tolleranze

I cuscinetti ISB ad una corona di rulli conici, sia metrici che in pollici, vengono realizzati nella classe di precisione normale o ABEC 3-P6, identificata mediante il brand ISB-EMS.

Gabbie

I cuscinetti ISB ad una corona di rulli conici hanno una gabbia in lamiera stampata d'acciaio (**Fig. 3a**) e possono essere impiegati fino ad una temperatura di esercizio pari a + 120°C.

Tolerances

ISB single-row tapered roller bearings, both metric and inches, are manufactured in the normal precision class or in ABEC 3-P6 class, corresponding to the ISB-EMS brand.

Cages

ISB single row tapered roller bearings have a pressed steel sheet cage (**Fig. 3a**) and can be used up to an operating temperature of + 120 °C.

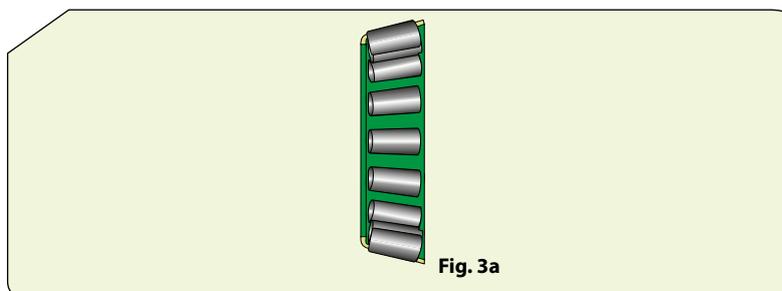

Fig. 3a

Carico minimo

I cuscinetti ISB ad una corona di rulli conici devono essere soggetti ad un certo carico minimo soprattutto se ruotano a velocità elevate. In questo caso le forze d'inerzia dei rulli e delle gabbie, nonché l'attrito del lubrificante, possono influire negativamente sulle condizioni di rotolamento all'interno del cuscinetto e possono provocare degli strisciamenti dannosi tra i rulli e le piste. Per un funzionamento senza slittamenti occorre quindi prevedere un carico radiale minimo dell'ordine di grandezza di $C/Pr > 0,01$.

Appellativi supplementari

I suffissi nella designazione dei prodotti vengono utilizzati per identificare alcune caratteristiche aggiuntive dei cuscinetti a rulli conici ISB e sono i seguenti:

B	Angolo di contatto maggiore di quello di esecuzione standard
DF	Cuscinetti appaiati disposti ad "X"
J	Gabbia stampata in lamiera d'acciaio del tipo a feritoie, centrata sui rulli. La cifra che eventualmente segue J indica un'esecuzione diversa della gabbia
P6	Precisione dimensionale e di rotazione secondo la classe di tolleranza 6 della norma ISO
TN9	Gabbia stampata ad iniezione in poliammide 6,6 rinforzata con fibre di vetro
X	Dimensioni d'ingombro modificate per essere conformi alle norme ISO

Minimum load

ISB single row tapered roller bearings must be subjected to a certain minimum load especially if they rotate at high speeds. In this case, the inertia forces of the rollers and cages, as well as the friction of the lubricant, can adversely affect the rolling conditions inside the bearing and can cause damaging sliding between the rollers and the raceways. Therefore, for operation without slippage, it is necessary to provide for a minimum radial load of $C/Pr > 0.01$ approx.

Additional suffixes

The suffixes in the product designation are used to identify some additional features of ISB tapered roller bearings and are as follows:

B	Contact angle greater than in standard execution
DF	Paired bearings, "X" arrangement
J	Molded steel sheet cage, slot-type, centered on the rollers. The number eventually following J indicates a different cage execution
P6	Dimensional and rotation accuracy according to tolerance class 6 of the ISO standard
TN9	Injection molded cage in polyamide 6.6, reinforced with glass fibers
X	Overall dimensions modified to comply with ISO standards
